

Supercharge Your Cloud Development and Delivery

Stackery empowers enterprise development teams to deliver AWS Well-Architected serverless applications quickly, securely, and at scale – without the headache of managing complex operations.

Stackery is building a future where developing, delivering, and managing cloud-native applications is intelligent, adaptive and automated. Use the Stackery secure platform to enable your team's focus on the business value of applications, not the toil, time, and cost required to deploy them.

Serverless, Simplified

Serverless computing no longer belongs to the development teams of the future. Real enterprise development teams are using this new cloud-native paradigm of modern application implementation to eliminate traditional operational responsibilities of capacity-provisioning and system maintenance.

The goal of a serverless approach is an enhanced focus on innovation and elimination of administrative overhead. But serverless development, delivery, and management involves a shift in thinking and setting up a scalable serverless application architecture with appropriate security measures can present a number of challenges. Stackery offers teams a key resource that helps realize the promise of serverless.

With Stackery, you'll fill in the gaps left by first-gen tooling and cruise around the confusion of AWS' ever-expanding AWS tooling – all with 60x the speed, 1/10 the cost, and 100x the scale.

With Stackery, you'll gain

✓ Accelerated Development

The Stackery CLI, Stackery VS Code plugin, and Stackery IDE extensions build on the AWS SAM CLI to bring local development and debugging of any Lambda function in any language or framework against the full runtime and cloudstack permissions. With Stackery, you'll gain critical architecture visualization and local cloud-testing capabilities that enable iteration in seconds so your team can focus on perfecting core business logic. Overall, the Stackery tools greatly accelerate application development & delivery – as much as 60x – giving development and DevOps teams the new powers to rapidly visualize, deploy, debug and update AWS SAM applications.

✓ Secure Delivery

Stackery streamlines the use of accounts, configurations and credentials as your team and application complexity grow - reducing costs by up to a factor of 10.

Using infrastructure-as-code provisioning built on top of cloud native foundations such as AWS CloudFormation, the Stackery tools help apply security defaults and best practices on day one. Stackery applies the full range of AWS security controls to the serverless development to directly address compliance risks without slowing down engineering team workflows.

✓ Scalable Teams

Equip your team with Stackery's serverless workflows and integrations and they'll unlock DevOps best practices to scale up their serverless project development and delivery. Stackery offers the ability to rigorously define environments (like test, staging, production), and control who has access to those environments for each and every application stack. A scalable, enterprise-grade operations console provides sophisticated runtime support to the most complex serverless systems.

✓ Well-Architected Solutions

Achieving the full benefits of modern software development and deployment means adhering closely to the [five pillars of AWS' Well-Architected Framework](#) with a clean separation of code, configuration, and credentials. This can seem like a daunting task without help. Using Stackery tools provides the firm foundations for your development and delivery teams to adhere to the Well-Architected Framework, combined with a deeper understanding of the relationships between the growing range of AWS services. The result is a simplified, accelerated, and efficient workflow for everyone.

✓ Exceptional Support

No development and delivery toolset would be complete without a solid support resource. The Stackery team is on hand to provide all the training and assistance your team might require – whether they are brand new to the serverless world, or already deeply experienced. Stackery rapidly responds to inquiries submitted via the in-app chat feature or support email.

Online, easy-to-follow quickstart guides are available for all common development languages and include follow-along tutorial videos. Also offered are regular, live Stackery tutorials on Twitch at stackery.io. All questions about serverless and Stackery are welcome, no matter what the designated topic of the session stream.

✓ A Growing User Community

Stackery is **built for teams** looking to modernize their stacks, accelerate their serverless development, and ensure the secure delivery of their applications across environments. Stackery customers have achieved success in many key business areas. Stackery customers have achieved success in many key business areas.

Highlights include:

Nationwide

- Relies on Stackery for a key revenue-generating web & mobile app supporting 10 million users.
- Uses Stackery to streamline management of development and production environments, reducing time on operational tasks and speeding time to market – from days to hours.
- Values the unique application visualization tools to ease onboarding of developers and collaboration with business owners.

Branch

- Relies on Stackery to ensure delivery consistency and SOC-2 compliance across environments.
- Used Stackery to refactor its application lifecycle workflow.
- Rapidly prototypes ideas and required infrastructure-as-code automatically.
- Increases developer velocity and accelerates new team member ramp-up time when on-boarding.
- Consistently sees delivery of new projects and updates in days, rather than weeks.

MasterStream

- Eliminated significant cloud operational costs using Stackery to modernize applications from monolithic to serverless architectures.
- Accelerated delivery of auto-scaling applications and required cloud infrastructure.
- Reduced database management overhead – provisioning, software patching, and more – to zero.

✓ Partnership with AWS

Stackery has developed a close partnership with AWS technical and business development leaders who recognize the power of good tools to accelerate the adoption and deployment of cloud technologies. Lead in part by two AWS Serverless Heroes and featuring a certification in AWS DevOps Competency, Stackery is deeply integrated with and trusted by AWS. [Visit Stackery's page on the AWS Marketplace and learn more about our partnership.](#)

Stackery is more than just a serverless development platform – it empowers your team to design, develop, and deliver serverless architecture while rapidly modernizing the core of your business.

Adopt the serverless development platform that produces lightweight, highly-organized, and repeatable applications. [Get started with Stackery today.](#)
